

Index

- abiotic factors, 2–22, 52–3, 57
Aboriginals, 264, 266–7
absorption of nutrients, 146
abundance, 2, 9–10, 13–19, 54–5, 58
Acacia spp., 41, 293, 299, 307, 307, 308
acidity, 7, 160
acidophiles, 217
Acropora yongei, 288, 288
active transport, 113–20, 113, 118, 140
adaptations, 39–40, 43
 Australian, 41–3
 digestive, 151–3
 field study, 55, 58
 reproductive, 284–6, 306–7
 survival due to, 254
adenosine triphosphate (ATP), 92, 131
aerobic respiration, 20–1
alkalinity, 7, 160
allelopathy, 28
amino acids, 196–7, 202–3
ammonia, 160
amphibians, 284, 288–9, 311, *see also*
 frogs and toads
Anabaena, 216
anaerobic organisms, 21, 212
anaphase, 189, 192
anemone fish, 30, 30
animals
 adaptations, 42, 284–6
 Australian, 263–4, 264
 cells, 83, 84, 86–7, 88, 127, 189–91,
 282–3
 competition between, 46
 extinctions, 312
 fossils of, 268
 functional organisation, 128–30
 as heterotrophs, 131
 measuring abundance, 14–16
 nutrition, 126
 pollination by, 293
 population trends, 24–5
 seed dispersal by, 298–9
 transport in, 156, 161–8, 162, 169–71
ant lions, 273
ant plant, 30
Antechinus stuartii, 25, 25
anthers, 291, 293–4, 296
apical meristems, 184, 193
aquatic environments, 4–9, *see also*
 marine environments
 abiotic factors, 8
 reproduction in, 286–7
 unique, 23–61
Archaea, 217, 218–19
archebacteria, 217
arid conditions, 10
Aristotle, 198
arteries, 169–70
asexual reproduction, 187, 300–2, 305–8
assimilation of nutrients, 146, 182
atmosphere, 201–2, 212–13
ATP (adenosine triphosphate), 92, 131
Australia
 adaptations in, 41–3, 306–7
 cane toads, 49
 climatic zones, 259
 current and extinct organisms, 270–1
 earthquake distribution, 245
 evolution of flora and fauna, 251–77,
 267–9
 fossil sites, 316, 316
 geological history, 234–6
 marsupials, 25
 native plant pollination, 302–4
 organisms, classification, 229
 palaeontology, 310–23
 plate tectonics, 243–7
 relationships between species, 275–7
 species survival in, 318–20
 terrestrial environments, 3, 4–5
 vegetation changes, 313
 volcano distribution, 246, 246
Australian Biological Resources Study,
 321
Australian Centre for Ancient DNA, 276
autotrophs, 33, 130, 139–41, *see also*
 plants; producers
Bacillus spp., 217
Bacteria, 216–19
Banksia spp., 296, 298, 299, 303, 304
Baragwanathia longifolia, 211, 268
barnacles, 11, 31
Baw Baw frog, 50, 50, 322
behavioural adaptations, 43
beneficial interactions, 25, 29–31
bilayers, 110
bilbies, 42
binomial system, 231
biochemistry, 136–8, 230
biodiversity, 50–1, 320–3
bioelements, 197
biogeography, 234–5, 241
biological classification, 222–3
biology skills, x–xii
biomarkers, 210
biomass pyramids, 36, 36, 37
biomes, 2, 260
biomolecules, 197, 198–200
biosphere, 2, 3
biota, Australian, 251, 310
birds
 fertilisation, 285, 289
 pollination by, 293–4, 297
 species loss, 311, 312
blood cells, 87
blood vessels, 169–70
blue banded bee, 295
‘blue bottle’, 26
blue gum, classification of, 229
Bluff Downs, 317
bodybuilding, 252
bone cells, 184
bone marrow, 184
bony fish, 284
botany, 64
Boveri, Theodore, 65
brachiopods, 268
breathing, *see* respiratory system
bronchi, 163
Brown, Robert, 64, 70
Brownian motion, 64, 114
brush turkey, 289, 289
buccal cavity, 164, 166, 249
budding, 301
Calandra spp., 24, 24
Calvin cycle, 137, 180
cane toads, 48, 49
canine teeth, 147–8
capillaries, 164, 170
carbohydrates, 102–3, 102, 110
carbon dioxide
 diffusion of, 114
 as excretory waste, 160
 in nutrition, 132, 142
 in respiration, 158, 164
carbon fixation phase, 136–8
carnassial teeth, 148–50
carnivores, 33, 148–9, 150, 151, 153
cartilaginous fish, 285
cassowaries, 50, 241, 241
cattle, 265
celery, 177
cells, 64, 66–99, *see also* meiosis; mitosis
 cell cycle, 187, 188
 division of, 182, 278–83
 growth in, 182
 membranes, 83, 97, 100–24
 optical microscopy, 85–7
 organelles, 87–97
 plants vs animals, 94
 respiration pathways, 21
 structure and function, 81–7, 126–7
 walls of, 97
cellulose, 94, 103, 148, 150
centrioles, 94

- centromeres, 188, 281
centrosomes, 94
channel proteins, 115
cheek cells, 83, 86–7
chemical respiration, 92
chemicals, 100–7, 155–6, *see also*
 biomolecules
chlorophyll, 20, 93, 132, 134
chloroplasts, 84, 93, 93, 96, 137, 192–4
chromatin material, 65, 76, 90, 189
chromosomes, 65, 90, 105
 determine heredity, 252–3
 discovery of, 76
 in meiosis, 278–83
 in mitosis, 187–8
circulatory system, 159–60, 169–71
classification of life, 222–32, 227
Cleithrolepsis, 268
climate change, 266–71
climatic zones of Australia, 259
CO₂, *see* carbon dioxide
collaboration in science, 70–1
colonial organisms, 205–6
colony wattle, 307–8, 307
commensalism, 31
companion cells, 174
competition, 45–7
compound microscope, 64, 68–9, 69, 74
conception, in fertilisation, 285
conservation of biodiversity, 50–1, 320–3
consumers, 20, 33
continental drift, 234–50, 237, 243, 245
convergent evolution, 272
copulation, 284
corals, 30, 45, 308
cosmozoan theory, 199
Crick, Francis, 65
crocodiles (*Crocodylus porosus*), 271,
 289, 289
cross-pollination, 292
crows, 273, 273
cyanobacteria, 210, 216–17, 216
cycads, 295, 295
cytokinesis, 187, 190–1, 190, 192
cytoplasmic membranes, 83, 97, 100–24
- daisies, 293, 295, 295
Darwin, Charles, 64, 214, 254–5, 254,
 272–3, 274
dating techniques, 229–30
decomposers, 32–3
deep ocean trenches, 243
degraders, 33
density of organisms, 10
dentition, 147–9, 152
desert, Australian, 4, 260
detritivores, 33
diastema, 148
dichotomous keys, 223–6, 224
Dickinsonia costata, 210
dicotyledons, 144
Dicroidum, 268
- diet, 150–1, *see also* digestion
differentiation of cells, 126–8, 182–3
diffusion, 108, 113, 114–16, 119–20, 119,
 122–3, 123, 139, 156
digestion, 145–6
dingo, 229, 264, 267
dioxynucleic acid (DNA), 65, 90,
 105, 192–4, 230, 276
diploid cells, 278
diprotodonts, 211, 264, 319
disease, 64, 71
distribution, 2, 9–10, 11–13, 54–5, 58
divergent evolution, 272
DNA (dioxynucleic acid), 65, 90,
 105, 192–4, 230, 276
Dollard, John and Peter, 64
Drakea glyptodon, 296, 296
Draper, John, 274–5
dry sclerophyll forests, 260, 263, 263,
 see also eucalypts
Dryandra quercifolia, 297
duck-billed platypus, *see* platypus
- Earth, age of, 196
earthquake distribution, 244, 244, 245
echidna, 289–90
